Oncology	

---

We can say with confidence that our services are truly exceptional and we welcome you to experience QTS and become one of our satisfied clients. Contact us for a risk free trial.

## Our Equipment

QTS utilizes a toll free, dial-in digital dictation system. Our system is web-based and allows an unlimited number of healthcare professionals to dictate medical documentation using toll-free telephone access. Providers who need more mobility can dictate using hand-held computers or digital voice recorders. Each dictation receives a file number for tracking purposes.

Our platform also provides secure internet access to dictations and transcribed reports. Via prompts, our software platform requires each dictator to login with a unique user ID and password to access their dictation files and transcripts. This type of authentication enables us to prevent any unauthorized access to patient data.

From any computer with internet access and a web browser, healthcare providers and administrators can check the status of jobs; monitor dictations and transcriptions; listen to dictations immediately after dictating; search documents; generate turn-around time reports, billing reports and activity logs; and view, download, email or fax documents. The software provides secure access anytime and anywhere.

Our system is 100 percent HIPAA compliant and very user friendly.
